Project Title: Advanced Exploratory Data Analysis & Business Intelligence System

Objective: To clean, analyze, and extract actionable business insights from transactional sales data.

Technologies Used: Python, Pandas, NumPy, Matplotlib, Seaborn, SQLite, Jupyter Notebook.

Methodology: Data Cleaning, Statistical Analysis, Visualization, Insight Generation.

Results: Identified top-performing categories, regional revenue patterns, and seasonal sales trends.

Future Scope: Real-time dashboard integration and predictive modeling using Machine Learning.
